

## Portfolio Description

The Everest series is a core portfolio strategy utilising the latest advancements in Evidence-Based Investing. The portfolio is scientifically structured to capture all the known dimensions of return from both equity and fixed-income markets in the most efficient and low-cost solution currently available to investors.

Long-term equity outperformance is derived from prioritising the value, size and profitability premiums over the market. For portfolios with fixed income allocations, term and credit premiums are dynamically maximised to derive optimal risk and return during different yield and credit cycles. Coupled with a regimented portfolio construction process, the portfolio has defined risk and return attributes which will help investors achieve their long term goals.

Everest 12 has a loss metric of -12% (VaR) with a globally diversified asset allocation of **70% Stocks** and **30% Bonds**, comprising over 9,000 securities from 47 countries and representing 35 currencies.

## Model Portfolio Statistics

Performance (as at 31 August 2020)

## Country Allocation<sup>2</sup>

## Long-Term Nett Return and Risk Attributes
